

## Environmental Policy

The Møller Centre is committed to minimising the environmental impact of the delivery of its services and to the improvement of the environment in any way possible. The Centre is determined to do all it can to ensure that the environment is passed to future generations in a better condition than it is today.

As an employer, the Centre aims to do this by:

- Meeting and where possible exceeding, the requirements of applicable legislation and regulations. This will be achieved through a commitment to research and development of the best practices in all facets of operations.
- Considering environmental factors in the Centre's decisions and activities, and fostering a sense of responsibility amongst all employees to achieve a reasonable continual improvement.
- Conserving energy and other natural resources through energy and water efficiency measures, green purchasing policies, by using less environmentally damaging fuels where cost-effective and practical, and by developing methods to reduce the amount of fuel used by cars on the Centre's business.
- Encouraging staff and guests to reduce their use of cars and, where appropriate and practical, to support any initiative which will encourage greater use of walking, cycling, public transport and car sharing as environmentally more acceptable means of travel.
- Minimising the amount of waste produced and promoting better re-use of the recycling of waste materials created by the delivery of our services.
- Providing staff with regular environmental awareness. Through ongoing discussions involving input from staff in all departments we are committed to developing a shared plan and then informing all staff of how we as a team can and will make a difference.
- Ensuring that this policy is widely communicated to all staff, guests, and contractors so our common goals and achievements are shared.

As a business, the Centre aims to do this by:

- Developing policies to ensure that where possible only those goods and materials that can be manufactured, used, and disposed of in an environmentally sustainable way are purchased.
- Working with our contractors and suppliers to help them improve their environmental performance and ensuring, as far as is practicable, that they apply environmental standards at least as high as our own.
- Regularly checking our environmental performance by reviewing progress on relevant corporate strategic objectives, and by progressively adopting the approach set out by the local government.
- Continuously monitoring the environmental impacts of our services (including energy, water, transport, and natural resources) to help find ways to improve our service delivery.
- Considering the environmental impact of our policies and services. As our commitment increases and so too does that of our suppliers, we will in time be able to measure our contribution to the improvement of the environment.
